EndomeTRIO
The endometrium matters
by Igenomix®

A complete view of endometrial health
to help you in your reproductive journey

Igenomix®
WITH SCIENCE ON YOUR SIDE
Endometrial health solutions

EndomeTRIO
The endometrium matters

ERA®
Endometrial Receptivity Analysis

Endometrial Receptivity Analysis
ERA evaluates endometrial receptivity and determines the optimal moment for embryo transfer.

EMMA
Endometrial Microbiome Metagenomic Analysis

Endometrial Microbiome Metagenomic Analysis
EMMA analyzes the endometrial microbiome for a better reproductive prognosis.

ALICE
Analysis of Infectious Chronic Endometritis

Analysis of Infectious Chronic Endometritis
ALICE detects the bacteria causing chronic endometritis providing the information necessary for personalized treatment.

EndomeTRIO includes all 3 tests
The endometrium matters

The endometrium is the internal lining of the uterus, where the embryo implants and grows during pregnancy.

IGENOMIX leads the research in this field by developing new tests to address different aspects of endometrial health.

Recent studies report that the endometrium plays an important role in reproductive success

Do you want to learn more about your endometrial health?

With only one endometrial sample, you’ll have a better understanding of your endometrial status to improve your chances of pregnancy.
During an IVF treatment, the embryo may not implant successfully if not transferred at the optimal time.

The endometrium is only receptive for a short period of time - this varies from one woman to another. This period of time is called the window of implantation (WOI).

**ERA is a diagnostic test that allows a personalized embryo transfer by synchronizing the embryo with the patient's window of implantation.**
Endometriyal health is essential for a successful pregnancy.

A healthy endometrium needs the optimal amount of healthy bacteria.

EMMA evaluates your endometrial floral and provides information for the best treatment to balance your endometrial flora, improving your pregnancy prospects.

If the levels of healthy bacteria in the endometrium are low or there are harmful bacteria, your chance of pregnancy may be reduced*.

Chronic endometritis is one of the causes of infertility. This disease causes endometrial inflammation, with no visible symptoms in most cases.

Traditional diagnostic methods cannot accurately identify the infectious bacteria, and non-specific antibiotics are often prescribed.

ALICE detects the most frequent bacteria causing chronic endometritis allowing for the prescription specific antibiotics and probiotics for successful treatment.

Chronic endometritis affects up to 30% of infertile patients. In cases of repeated implantation failure or recurrent pregnancy loss, this can rise to 66%*
