New Smart PGT-A Plus

Our most advanced 4-in-1 genetic test offers increased accuracy and confidence for embryo transfer

SMART PGT-A

Maximizes the likelihood of successful reproduction by carefully selecting the optimal embryo for transfer.

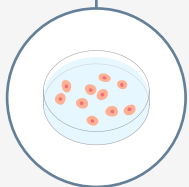

GENETIC PN CHECK | PLOIDY

Avoids transfer of triploid embryos and increases the number of viable euploid embryos available for transfer by identifying and rescuing true 2PN embryos from among morphologically identified 0, 1, and 3 PN embryos.

CONTAMINATION

Our testing process includes checking the embryo biopsy for contamination by external DNA, significantly reducing the risk of misdiagnosis.

SIBLINGS QC

Provides patients with the assurance that the tested embryo is genetically related to their other embryos, reducing the risk of sample mix-ups due to human error.

What makes our Smart PGT-A Plus stand out from the rest?

SUPERIOR ACCURACY

PGT-A Plus offers enhanced confidence in robust and accurate results, utilizing two independent analyses to detect any abnormalities.

AUTOMATION & ARTIFICIAL INTELLIGENCE

PGT-A Plus is strengthened by the power of big data and artificial intelligence, effectively overcoming the limitations of human subjectivity and greatly reducing the risk of human error.

CLINICAL IMPACT

PGT-A Plus improves confidence and accuracy in selecting the optimal embryo for transfer, thereby reducing the risk of miscarriage due to previously undetected abnormalities.

PN: Pronuclear
QC: Quality Control
